INTRODUCTION

A SHORT STORY ABOUT THE PROGRAMME

With this brochure we want to give you some highlights from the Interreg IV A Oresund–Kattegat–Skagerrak programme, a programme involving Sweden, Denmark and Norway. The aim with this programme is to encourage and support cross-border co-operation in the southwestern part of Scandinavia. The programme area shares many of the same problems and challenges. By working together and exchanging knowledge and experiences a sustainable and balanced future will be secured for the whole region. Funding from the European Regional Development Fund is one of the important means to enhance this development and to encourage partners to work across the border.

In this brochure we present 7 ongoing projects co-financed by the Oresund–Kattegat–Skagerrak programme.

We have furthermore gathered a list of all our 59 approved full-scale projects to date. From this list you can see that the projects cover a variety of topics, involve many actors and plan to develop a range of solutions and models to benefit the Oresund–Kattegat–Skagerrak area.

The brochure is developed by the joint technical secretariat. The brochure covers a period from March 2008 to June 2010.

It is our hope that the brochure shows the diversity in the project portfolio as well as the possibilities of cross-border cooperation within the framework of an EU-programme.

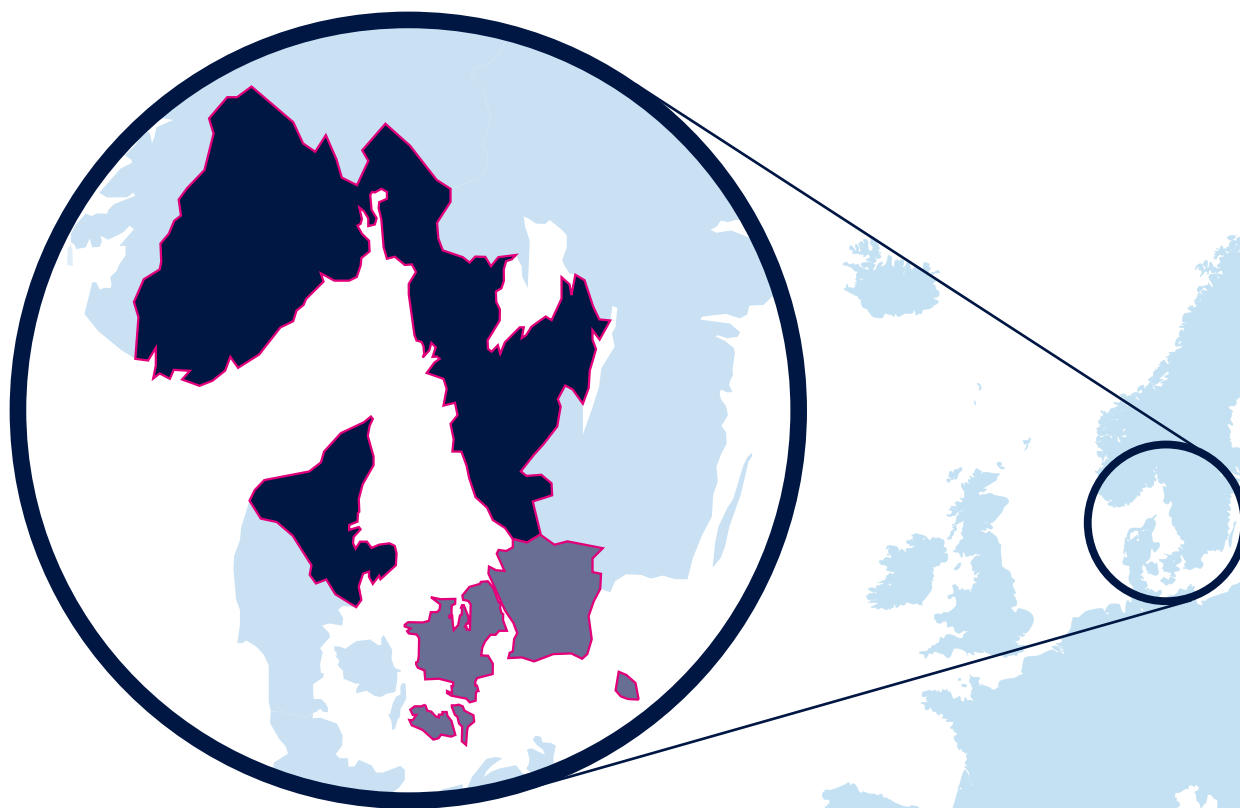

September 2010

STRUCTURE OF THE INTERREG IV A ORESUND–KATTEGAT–SKAGERRAK–PROGRAMME

The Interreg IV A Oresund–Kattegat–Skagerrak–programme 2007–2013 aims at increased co-operation across the borders of the Oresund–Kattegat–Skagerrak–area. The programme provides funding for cross-border co-operation projects. Altogether 105 million euros from the European Regional Development Fund will co-fund projects in the participating regions of Denmark and Sweden by 2013, and in addition to the European funding Norway contributes with 15 million Euro, which enables cooperation across the region in projects with partners from Danmark, Sweden and Norway.

PROGRAMME AREA

The region is connected by the oceans Kattegat, Skagerrak and Oresund. The region inhabits 9 million Scandinavians and covers an area of 125 588 km², including three countries and two capital cities along the coast. As the map shows the programme is split into three project areas: Kattegat-Skagerrak, Oresund and Oresund-Kattegat-Skagerrak.

● KATTEGAT-SKAGERRAK ● ORESUND ○ ORESUND-KATTEGAT-SKAGERRAK

PROGRAMME PRIORITIES

The programme's vision is to create a region which is attractive and competitive, and characterised by knowledge-based cooperation and sustainable development. The programme's broad objectives are to:

- Increase sustainable economic growth and contribute to the EU's regional development objectives;
- Develop a physically and organisationally homogeneous region by stimulating cooperation and common use of resources; and
- Increase integration by improving the mobility of people and businesses.

The Programme is structured according to three priority axes and each project should contribute to one of the programme priorities:

PRIORITY 1: PROMOTE SUSTAINABLE ECONOMIC GROWTH

The aim of the priority is to improve conditions for growth and sustainable competitiveness based on the region's existing strengths. Projects will focus on stimulating growth promoting activities in the areas of trade, research and education, as well as in the wider economy.

For example:

- produce common innovation strategies;
- improve guidance services for small and medium-sized enterprises;
- encourage joint development and marketing of regional events;
- foster cooperation between clusters and research institutes; and
- encourage cooperation on sustainable tourism.

PRIORITY 2: TYING THE REGION TOGETHER

This priority focuses on creating a physically and organisationally homogeneous region, while making it easier to cooperate and share resources.

For example:

- develop information systems, products and services for road users and other travellers;
- develop a safer and more sustainable transport system;
- encourage cooperation between the region's health services; and
- develop greater cooperation on maritime safety issues.

PRIORITY 3: PROMOTE EVERYDAY INTEGRATION

The aim is to eliminate barriers and encourage and improve contacts across borders for people, businesses and organisations and strengthen a common identity in the region.

For example:

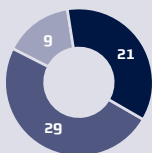

- develop common training programmes;
- labour market initiatives and;
- encourage cooperation between tourist organisations, schools and cultural institutions

NUMBER OF PROJECTS APPROVED

The programme has approved 59 full scale projects and in addition to this a number of small scale projects. In this brochure the focus is on the 59 projects. The figures below show the numbers of full scale projects according to priority and to project area.

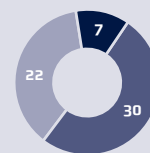

NUMBER OF PROJECTS PER PRIORITY

- Sustainable economic growth (21 projects)
- Tying the region together (29 projects)
- Everyday integration (9 projects)

NUMBER OF PROJECTS PER PROJECT AREA

- Oresund-Kattegat-Skagerrak (7 projects)
- Oresund (30 projects)
- Kattegat/Skagerrak (22 projects)

PROJECT AREAS

In the programme we work with 11 themes. The themes show the working areas of the projects. In the brochure we have chosen to split the 7 interviews into our themes. The themes are:

- | | |
|---|--|
|  Business development and entrepreneurship |  Skills and labour market |
|  Infrastructure, transport and planning |  Tourism and branding |
|  Environment and energy |  Culture and media |
|  Maritime issues |  Health Care issues |
|  Innovation, research and development |  Safety issues |
|  Education | |

FINANCIAL OVERVIEW

Budget

The programme has a total funding of 120 MEUR, this figure includes both funding from the European Development Fund as well as funding from Norway.

FUNDING PER PRIORITY

Priority	Total budget €	Budget ERDF €	Budget Norway €
1. Sustainable economic growth	56.935.263	49.834.543	7.100.720
2. Tying the region together	43.820.909	36.720.189	7.100.720
3. Everyday integration	19.938.030	18.360.093	1.577.937
Total	120.694.202	104.914.825	15.779.377

Allocated Funds

The programme has allocated about 53% of the funding at this stage of the programme.

ALLOCATED FUNDS PER PRIORITY

Priority	Total budget €	Budget ERDF €	Budget Norway €	Allocated Funds €	%
1. Sustainable economic growth	56.935.263	49.834.543	7.100.720	32.472.093	57%

BÄRKRAFTIGT RÄKFISKE I SKAGERRAK

SUSTAINABLE USE OF
SHRIMPS
IN SKAGERRAK

The key actors in the fishing industry will work together to find new solutions for sustainable shrimp fishing in the Kattegat/Skagerrak maritime region. Based on a joint analysis of existing as well as new data the actors will provide updated information regarding the total quantity of shrimps in Skagerrak.

The results of this analysis will be used as an important input to formulate a sustainable development plan for the future shrimp fishing in Skagerrak.

In economic terms shrimp fishing in the Kattegat/Skagerrak region is the most important of all the fisheries with a firsthand value of approximately 50 MEURO (SEK 500 milj.) per year. Further, a high percentage of the population in Denmark, Sweden and Norway live in the coastal areas and shrimp fishing is definitely an important economic resource that feeds many families.

However, the amount of shrimps in the sea differs from year to year, which in turn influences the fishing quotas and the price of fresh shrimps. The project has received

funding to help find new ways to work with a sustainable use of this significant natural resource.

The new information will be used to enhance the quality of the decision making process regarding how to implement sustainable shrimp fishing in Skagerrak. The project will gather existing information, work in clusters, and use modern DNA technology to identify local quantities of shrimps. Also, the project aims to integrate this knowledge in a new and improved model, which can be used as a tool for the drawing up of a sustainable development plan for the future shrimp fishing in Skagerrak.

With climate change many different factors can affect the future amount of shrimps in the sea. Today, it is not possible to determine whether there is one or several different species of shrimps in Skagerrak and the ambition of the project is to find out as much as possible about the shrimps and disseminate the information widely in order to make sure that shrimps may continue to be an important part of the cultural heritage of this region in the future.

The partnership consists of various relevant actors in the region and research institutions co-operate with management authorities and representatives from the fishing industry. Even individual fishermen are involved in the project as they have valuable knowledge about the actual conditions of the fishing waters.

Since the partnership involves a broad variety of actors it should be possible to use the results of the scientific research more effectively than would have been possible otherwise.

KASK INNOVATION

STRENGTHENING THE

INNOVATION CAPACITY

IN THE HEALTH CARE SECTOR

The KASK Innovation project aims at strengthening the user driven innovation process as well as the innovation process driven by employees. New ideas and innovations from the public health care sector will be gathered across national frontiers and institutional differences. The project brings together three university hospitals from Denmark, Sweden and Norway to raise the number of projects with commercial potential and to generate sustainable economic growth in the Kattegat/Skagerrak region.

In the future innovation capacity will be a competitive factor even for public institutions but today only a few hospitals have put innovation high on the agenda. However, innovation is a hot issue for the three hospitals involved and therefore it was no problem to find the necessary energy and power to develop the concept of the project.

According to the Danish project coordinator, Pernille Mejer Højholt, “the large number of employees working at the three hospitals and all the patients constitutes the ba-

sis on which the innovation work will be organized in order to highlight unused resources and new ideas”. Furthermore, she believes that the cross border cooperation will enhance the possibilities for obtaining synergies between the partners in the project and provide a broader potential for innovation. She goes on stating that, “It is quite inspiring to work with partners who are just as committed as you are and I also experience that work is more effective when you are able to go beyond your own potential and use the total potential of the critical mass”.

The objective of the KASK Innovation project is to present more than 700 ideas for innovation and that 30 % of these ideas are implemented. Furthermore, the project will analyze the effect of innovation within the hospitals, identify good practice and develop a new tool to measure the level of innovation.

The project partners are convinced that the final result will have a big influence even for other hospitals not directly involved

since the project will present new insight on how to optimize innovation processes. Hopefully, the results of the project will lead to new technology based companies in the Kattegat/Skagerrak region.

IBU ORESUND

WITH

REGIONAL ENLARGEMENT

AS OBJECTIVE

The project IBU Oresund has been granted 1.9 million euros from the European Regional Development Fund to analyse the need for investments in transport and infrastructure in the Oresund region.

The project partnership involves Region Skåne and its Danish neighbouring regions, the Capital city region (Copenhagen) and Region Själland. Around thirty municipalities, regions and authorities on both sides of the straits are participating. The project will run to the end of 2010.

“The objective is to establish a common knowledge base and reach a consensus on what type of investments should be prioritised”, says project leader Charlotte Lindström at Region Skåne. In addition, the parties involved in the project will be able to use the results and the analyses in their planning. Another objective is that the Region Hovedstaden, Region Själland and Region Skåne will address the political national level in Sweden and Denmark speaking with one voice.

On the Swedish side, there are

between 1.1 and 1.2 million inhabitants. Regional expansion and a large critical mass of the workforce and competencies are important factors in the competition with other regions. An integrated labour and housing market in the Oresund region provides development potential. In total the Oresund region has a population of around 3.6 million. But increased integration, good communications and a high level of accessibility is required. “It is therefore important to develop cooperation across the country borders and to have common objectives and priorities”, says Charlotte Lindström. “The Oresund region has a very high level of accessibility to other parts of Europe. Thanks to the fact that we have Copenhagen airport in the region, we can reach a great number of destinations abroad. But we also need to plan for alternatives to flying and be prepared for the day when, or if, flying is no longer as competitive and we also need to consider carbon dioxide emissions. That’s where the dis-

cussion about high-speed trains comes in”, says Charlotte Lindström.

“It is important that we spread the results widely”, says Charlotte Lindström. “This is necessary so that municipalities will be able to plan for more effective land use and for sustainable and robust transport solutions”, she concludes.

WOMEN IN BUSINESS

FEMALE ENTREPRENEURSHIP

“Only 30% of new companies in the Kattegat/Skagerrak region are started by women. We want to change that”, says Hilde Lona, project leader for Women in Business.

“As it stands today, the Scandinavian countries have different ways of investing in women entrepreneurs. We are going to conduct the project jointly across country borders in order to highlight issues so that new knowledge about which factors you should focus on when working with women entrepreneurs is developed. At the same time the project will help strengthen the companies that participate and contribute to an enhanced Scandinavian network”, says Hilde Lona.

The project has clear objectives, target groups, activities and methods in order to measure achieved results. Among other things, 80% of the participating companies in the project will have proven their ability to innovate after having participated in the project. The results will easily be able to be transferred to other operators to work with these issues and the knowledge of women entrepreneurship

will increase considerably within the programme area. In order to achieve this, the project will work directly with the support of already established women entrepreneurs and build up a support apparatus for future new establishments. Similarly, the project will cooperate with universities and research institutions in order to increase the understanding of the type of problems that arise at the same time as they will work actively with issues that concern public organisations with a focus on trade and industrial development. All in all, the project will have a considerable impact on entrepreneurship throughout the entire region.

Women in Business have a total of ten partners from Norway, Sweden and Denmark. The analysis work which was carried out early on in the project, both in order to illustrate the problem areas and also to map out strengths and weaknesses in the partnership, has been decisive for the development of the project.

“During the development of Women in Business, we have placed great emphasis on getting the

partnership to meet regularly. This has been beneficial for everybody, to jointly discuss the project and also to agree on expectations and objectives”, says Hilde Lona. She also wants to emphasise that it has been very important at the partnership meetings to discuss different concepts so that everybody has the same idea as to what, for example, the concept of entrepreneurship means, because it transpired that people have a different understanding depending on background and previous experiences.

BRAND IT

**INCREASED AWARENESS
OF THE ORESUND REGION'S
ICT CLUSTER**

The Oresund region is going to be branded as a strong and dynamic information and communication technology (ICT) cluster to attract ICT actors from all over the world to settle in the region. This is one of the aims of the Brand IT project, which is an extensive brand profiling campaign for the ICT cluster in the Oresund region. The overall aim of the project is to generate growth in the ICT sector, to increase the possibilities of competing to attract international capital, companies and expertise to the region.

The ICT cluster in the Oresund region is one of the largest in Europe with more than 10 000 companies. Despite this, up to now the awareness of the cluster has been relatively low. "The first phase of the project has therefore been dedicated to a comprehensive analysis so as to be able to produce market strategies and activity plans and to address international actors", says

Micael Gustafsson, MD of Oresund IT. "It is a major challenge for us to ensure that the consortium, which consists of both academic parties, public sector bodies and business, pulls in the same direction."

Another lesson is that it seems easier to sell the region's advantages to foreign actors than to our own region. "We have noticed this particularly in contacts with the media. When we were in Portugal we were covered by two leading daily newspapers, national TV and some radio stations. Here at home the interest has been almost non-existent, even though we are working on expanding one of the largest sectors in society that already employs more than 100 000 people today."

Nevertheless, the biggest, and best lesson so far is the positive reception the project has received. "We are looking forward with great optimism to sell the region to the rest of the world", says Micael Gustafsson.

VISK

COOPERATION WILL ENSURE
WATER QUALITY

Water-borne viral infection according to WHO is the greatest health risk associated with water supply. Due to global climate change with increased precipitation increases the risk of infection associated with water sources. The Scandinavian cooperation project VISK brings together expertise from the Oresund-Kattegat-Skagerrak region in order to reduce the society's vulnerability to viral infection.

"The project will look at how to improve conditions for increasing the quality of raw water. We will also study how viral infections are affected over time and how viral infections are affected by the climate changes. The project takes as its startingpoint two major rivers, the Göta River and Glomma", says Lena Blom, project manager for VISK from the Recycling office in Gothenburg.

The partnership consists of Danish, Swedish and Norwegian research and university environments, water works and municipal authorities. The project will identify risks and create a common action plan and manual for local water supply and sewerage operators dealing with

water-borne viral infections. The project will assist operators in preventing the identification of crises with waterborne viral infection.

The project will investigate how viruses spread in water currents and how to eliminate them. Another dimension is to investigate how to optimize communication during a virus outbreak to minimize the damage. An important point is to ensure that authorities have the knowledge of how to act in a situation of virus outbreak.

Lena Blom has been a part of the preparation of the project and has met with all the partners involved. The organizations which were unable to be involved as partners in the project will contribute with their competence and participate partly in the project.

"When we were working on assembling the partnership, we tried to get a good mix of expertise from various organizations and institutions. It was crucial to involve partners with different approaches, skills and experience. The very origin of the project is that we need common action to solve the prob-

lems of waterborne viral infections", says Lena Blom.

The project's will create a webpage from which the project will communicate within the partnership and ultimately use as an external tool of communication of results in the project. The action plans and the manual that will be developed during the project will be the results of the project. Lena Blom has great confidence that the results and especially the network established during the project will continue and will be able to continue the common work after the project ends. In particular, she sees the project as a communication channel which can be utilized in the future in order to streamline the work to increase the water quality in Scandinavia.

NETWORK NORDEN

IN SCANDINAVIA WE ARE MORE DIVERSE THAN WE THINK

The working culture in the Nordic countries is more diverse than we tend to believe. This creates problems that cost time and money for the companies at stake.

Initially the idea was to make a common project, that would investigate and develop solutions to these cross border activity challenges. With almost 300 000 Euro in grant from Interreg the project is now at full speed.

But what is the core problem, the Nordic countries have been cooper-

ating for ages? According to Jeppe Thilke, the project manager, this is exactly one of the problems. As he states: "the problem is that we tend to think we are more a-like than we actually are, and that creates the sense of kinship which may not be the case to exist in real life". We communicate and work together across the borders believing that we share the same understanding and work methods without there being any reality in it. And that creates challenges. The problems often

tend to rest on person to person or specific organisational issues. In consequence we label the person or persons on the other side of the border poorly qualified, when instead the real issue to deal with is national and cultural diversities.

Once the project gets the companies are on board the academic partners from both Norway, Sweden and Denmark can initiate their research. Their academic findings will be implemented when developing concrete and practical tools for courses and seminars with Nordic working culture as the topic. Another task will be to develop a model that can measure and illustrate how well a company is at integrating employees from other Nordic countries. The intention is that: "companies get a better integrated staff – simply more mature in terms of making the right decisions and communicating with each other, so that misunderstandings do not arise within the organisation. The issue at hand is to have an understanding of your fellow colleague's background in order to make communication

by phone or e-mail smoother".

Another objective is to build a staff/exchange platform which originates from the already successful "Nordjob-portal" (primarily exchange of young people). The intention with the staff-exchange platform is that the companies and staff members who participate in the seminars also benefit from this cross-border exchange possibilities between the Nordic countries.

The long term objective is that it will be easier for companies to move within Scandinavia. According to Jeppe Thilke, Scandinavia is the obvious and natural place to make business, mergers and partnerships before taking the next step – on to the world market.

When asking Jeppe Thilke if the project strives/works for a more homogeneous Scandinavia, he promptly answers: "It comes naturally that we evolve and become more homogeneous, but at the same time you have to be conscious to the fact that we are different from each other and then recognize it. It is not so much about har-

monising Scandinavia – but more a question of communicating the diversities and creating the basis for enhanced cultural exchange and at the same time greater consciousness about Nordic cultures".
